Habitat for Humanity Unveils First Open Concept, Energy-Efficient Home in Round Rock

Round Rock, TX—September 16, 2009— Williamson County Habitat for Humanity dedicated the first newly designed residential floor plan in Round Rock this weekend to a very deserving family who will now be residing in the energy-efficient home located at 401 Spring Street.

In January, Moman Architects was selected to re-design five residential floor plans for the nonprofit, which have become the foundation for Round Rock’s first Habitat homes and others slated to be built throughout the county. As a leader in commercial design, Moman is highly experienced in designing buildings that are economical and efficient. The new homes are an open-concept plan, meaning every inch of space is utilized making the homes feel larger and more comfortable. The majority of the materials used are energy-efficient and green, resulting in lower monthly utility bills.

All the labor for this Habitat home was a unique collaborative effort on behalf of numerous local faith-based organizations including the Round Rock Church of Christ and St. Philips Methodist Church, as well as hundreds of volunteers and supporters. Supporters included the City of Round Rock, Hunter Douglas, Whirlpool, and Valspar.

“Our team is honored to be a part of this special home dedication for such a deserving family,” says John S. Moman, AIA, and President of Moman Architects. “We look forward to a continued partnership with Habitat for Humanity as this is the first of several exciting projects to come.”
